

Name: Jordan Ledbetter

Title: Linear Regression App

App Description: I created a linear regression app that takes an input from the user to generate a random scatter plot and its regression line. This app shows how two variables relate to one another and what a regression line would look like according to the variable's association. In addition, I added another input value that changes the scatter plot based on the number of observations in the randomly generated data.

App Features: three sliders, one button, and an interactive scatterplot
